

Back-end

Javascript Modules

- To structure an application coherently, the backend consists of separate Javascript files.
- Objects declared in these files must be
 - exported by one file
 - imported by another
- In order to keep each module focused on a specific responsibility

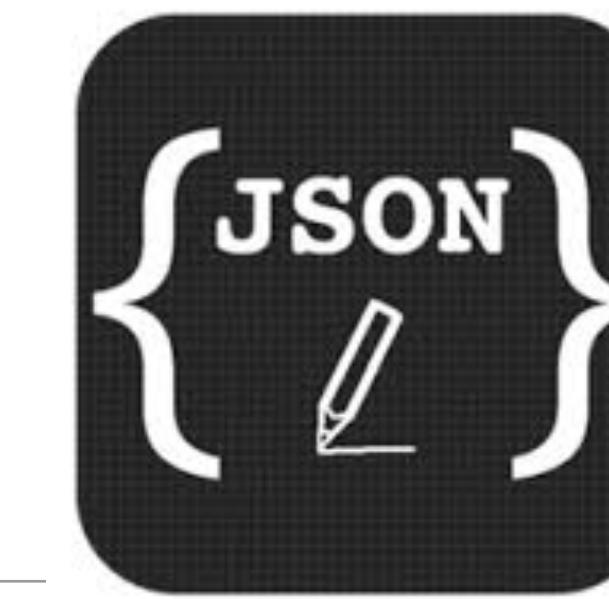

Application Structure

```
└ assets
  controllers/about.js
  controllers/dashboard.js
  utils/logger.js
  views/layouts/main.hbs
  views/partials/mainpanel.hbs
  views/partials/menu.hbs
  views/about.hbs
  views/dashboard.hbs
  .eslintrc.json
  .gitignore
  README.md
  package.json
  routes.js
  server.js
```

- App implements Routes + Model/View/Controller Architecture
- These objects collaborate to support structured, predictable application workflow

Back-end

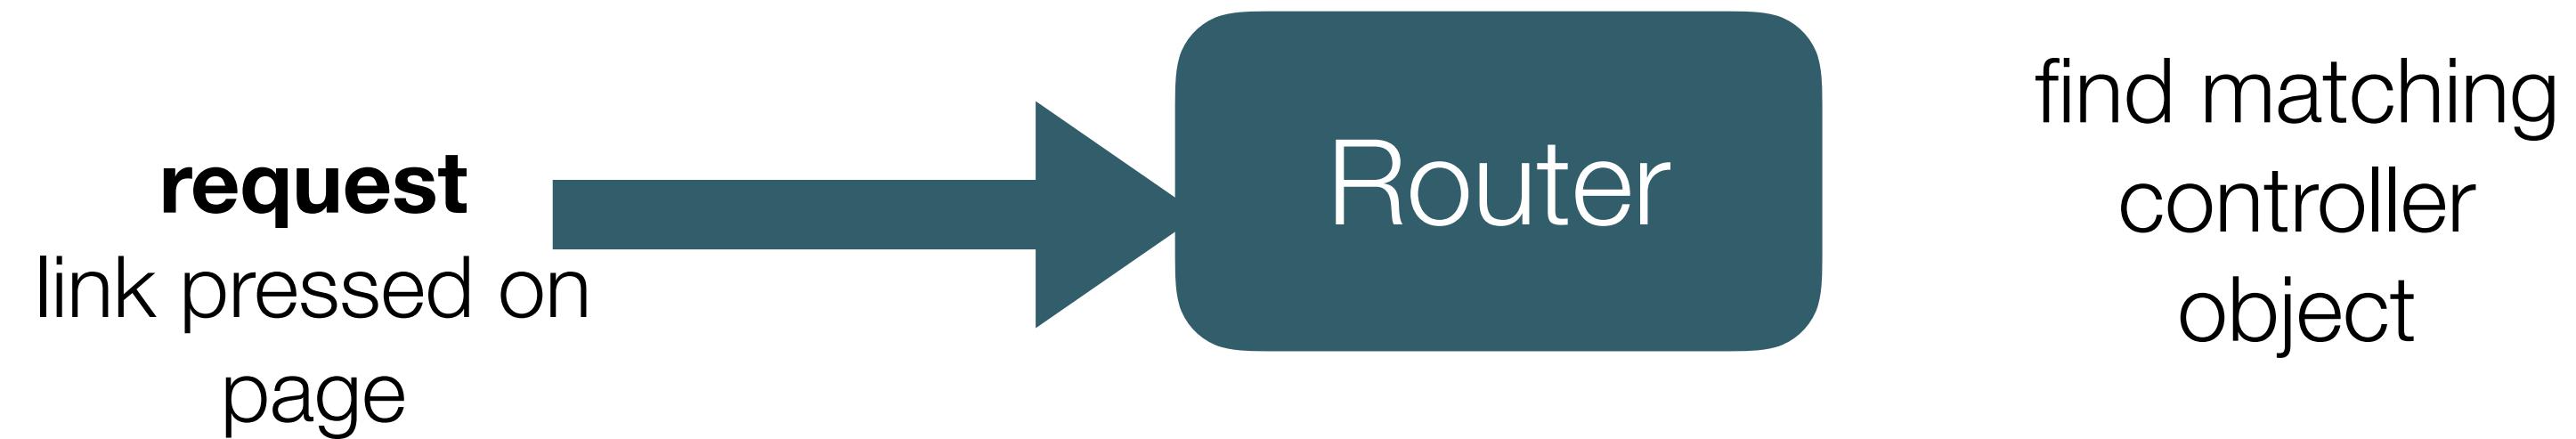

- All written in Javascript + JSON
- Consists of:
 - **Server** - main entry point
 - **Routes** - supported urls
 - **Controllers** - objects to handle the routes
 - **Config** - .gitignore, .jscsrc, env, package.json, readme.md
- Will include **Models** later...

```
controllers/about.js  
controllers/dashboard.js  
utils/logger.js  
.eslintrc.json  
.gitignore  
README.md  
package.json  
routes.js  
server.js
```

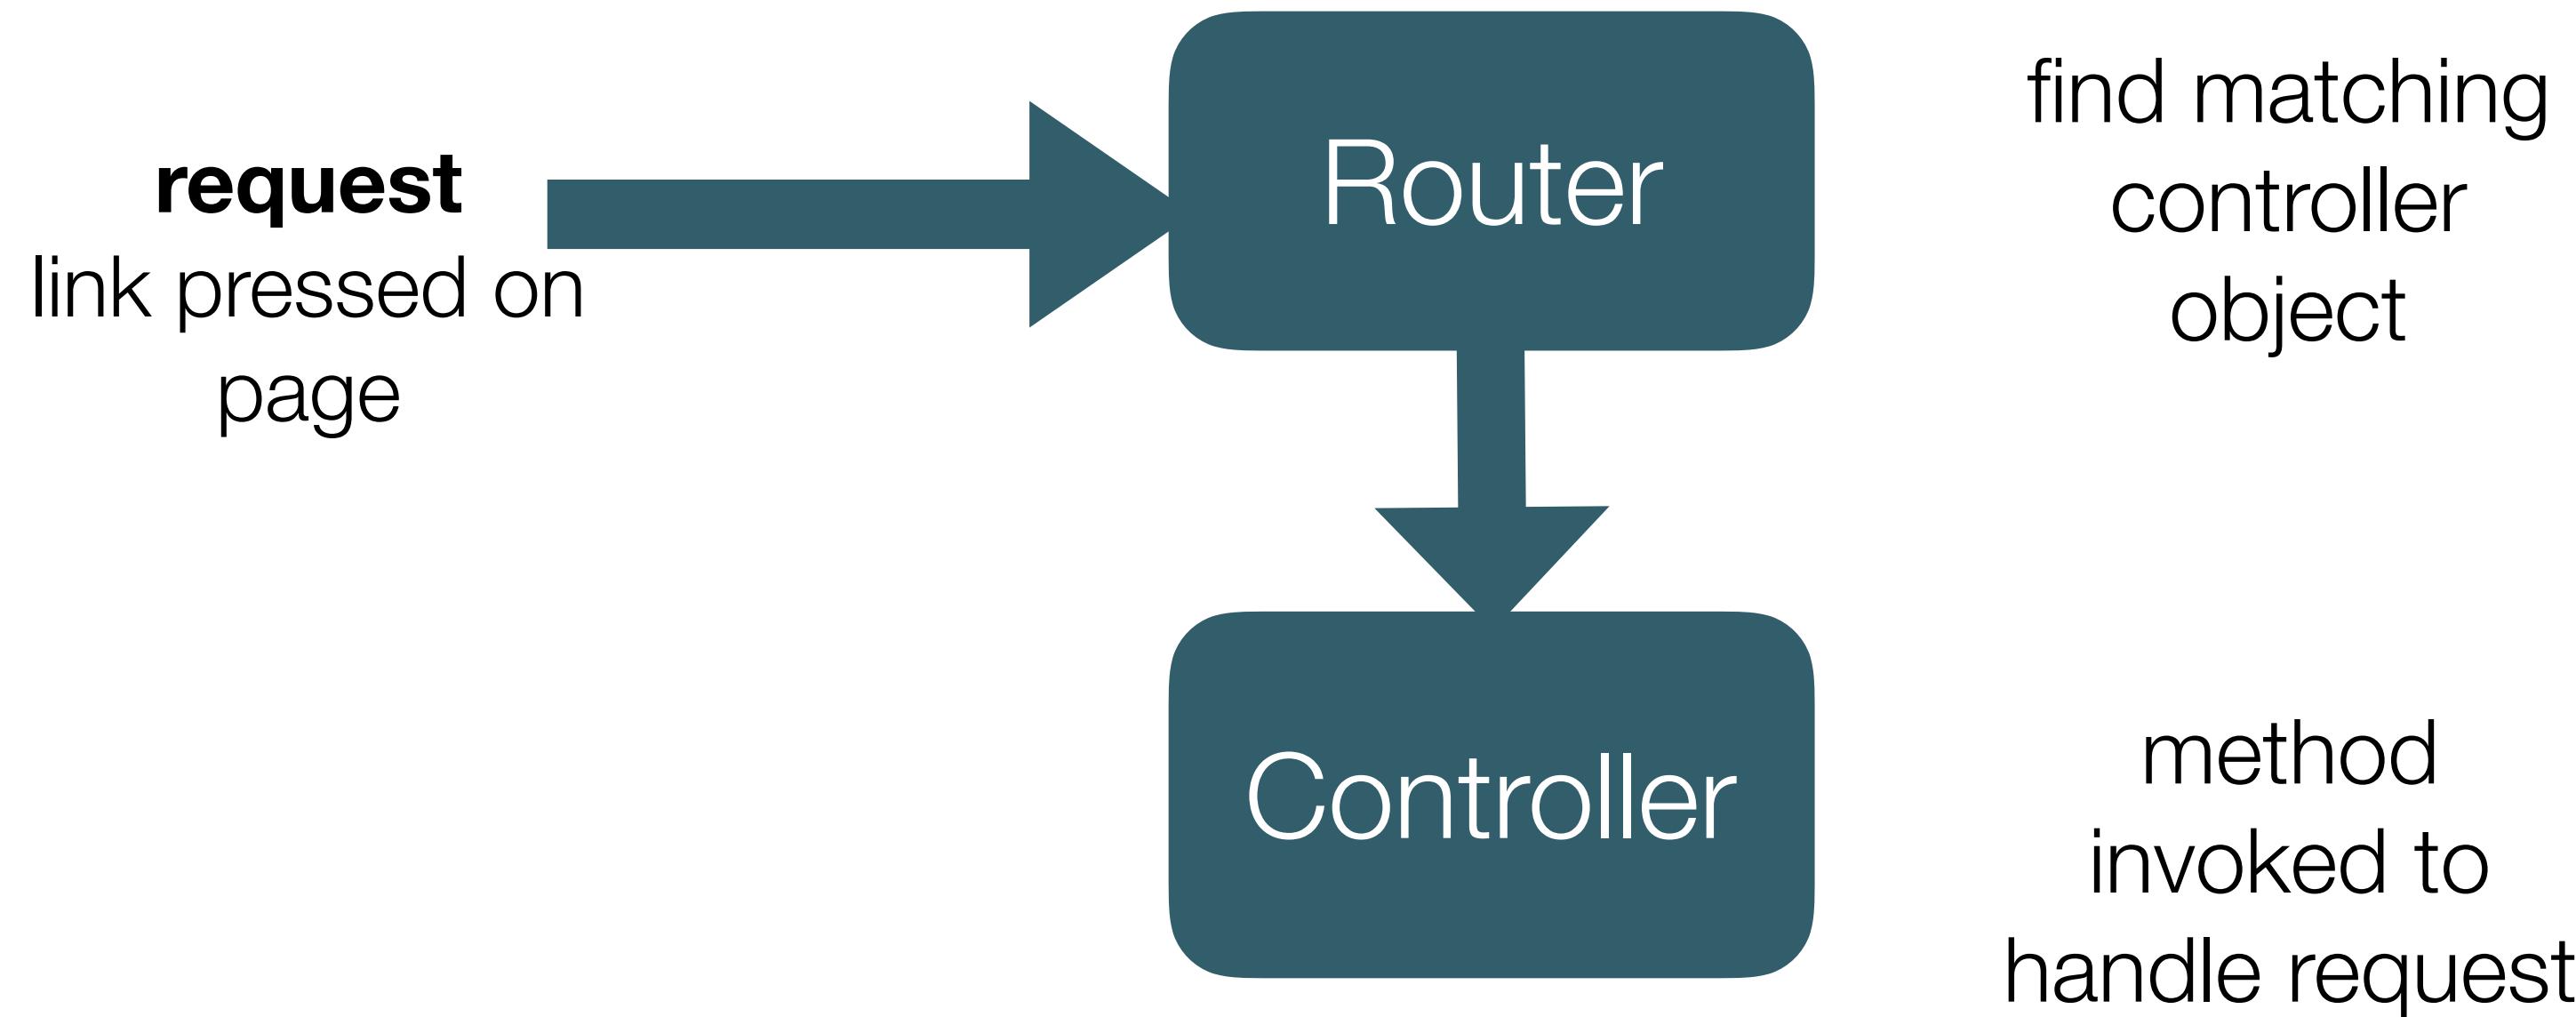

Request/Response Lifecycle

1. **Request** - link pressed on page
2. **Router** - find matching controller object
3. **Controller** - method invoked to handle request
4. **View** - data sent from controller to view to construct response
5. **Response** - complete page rendered into browser

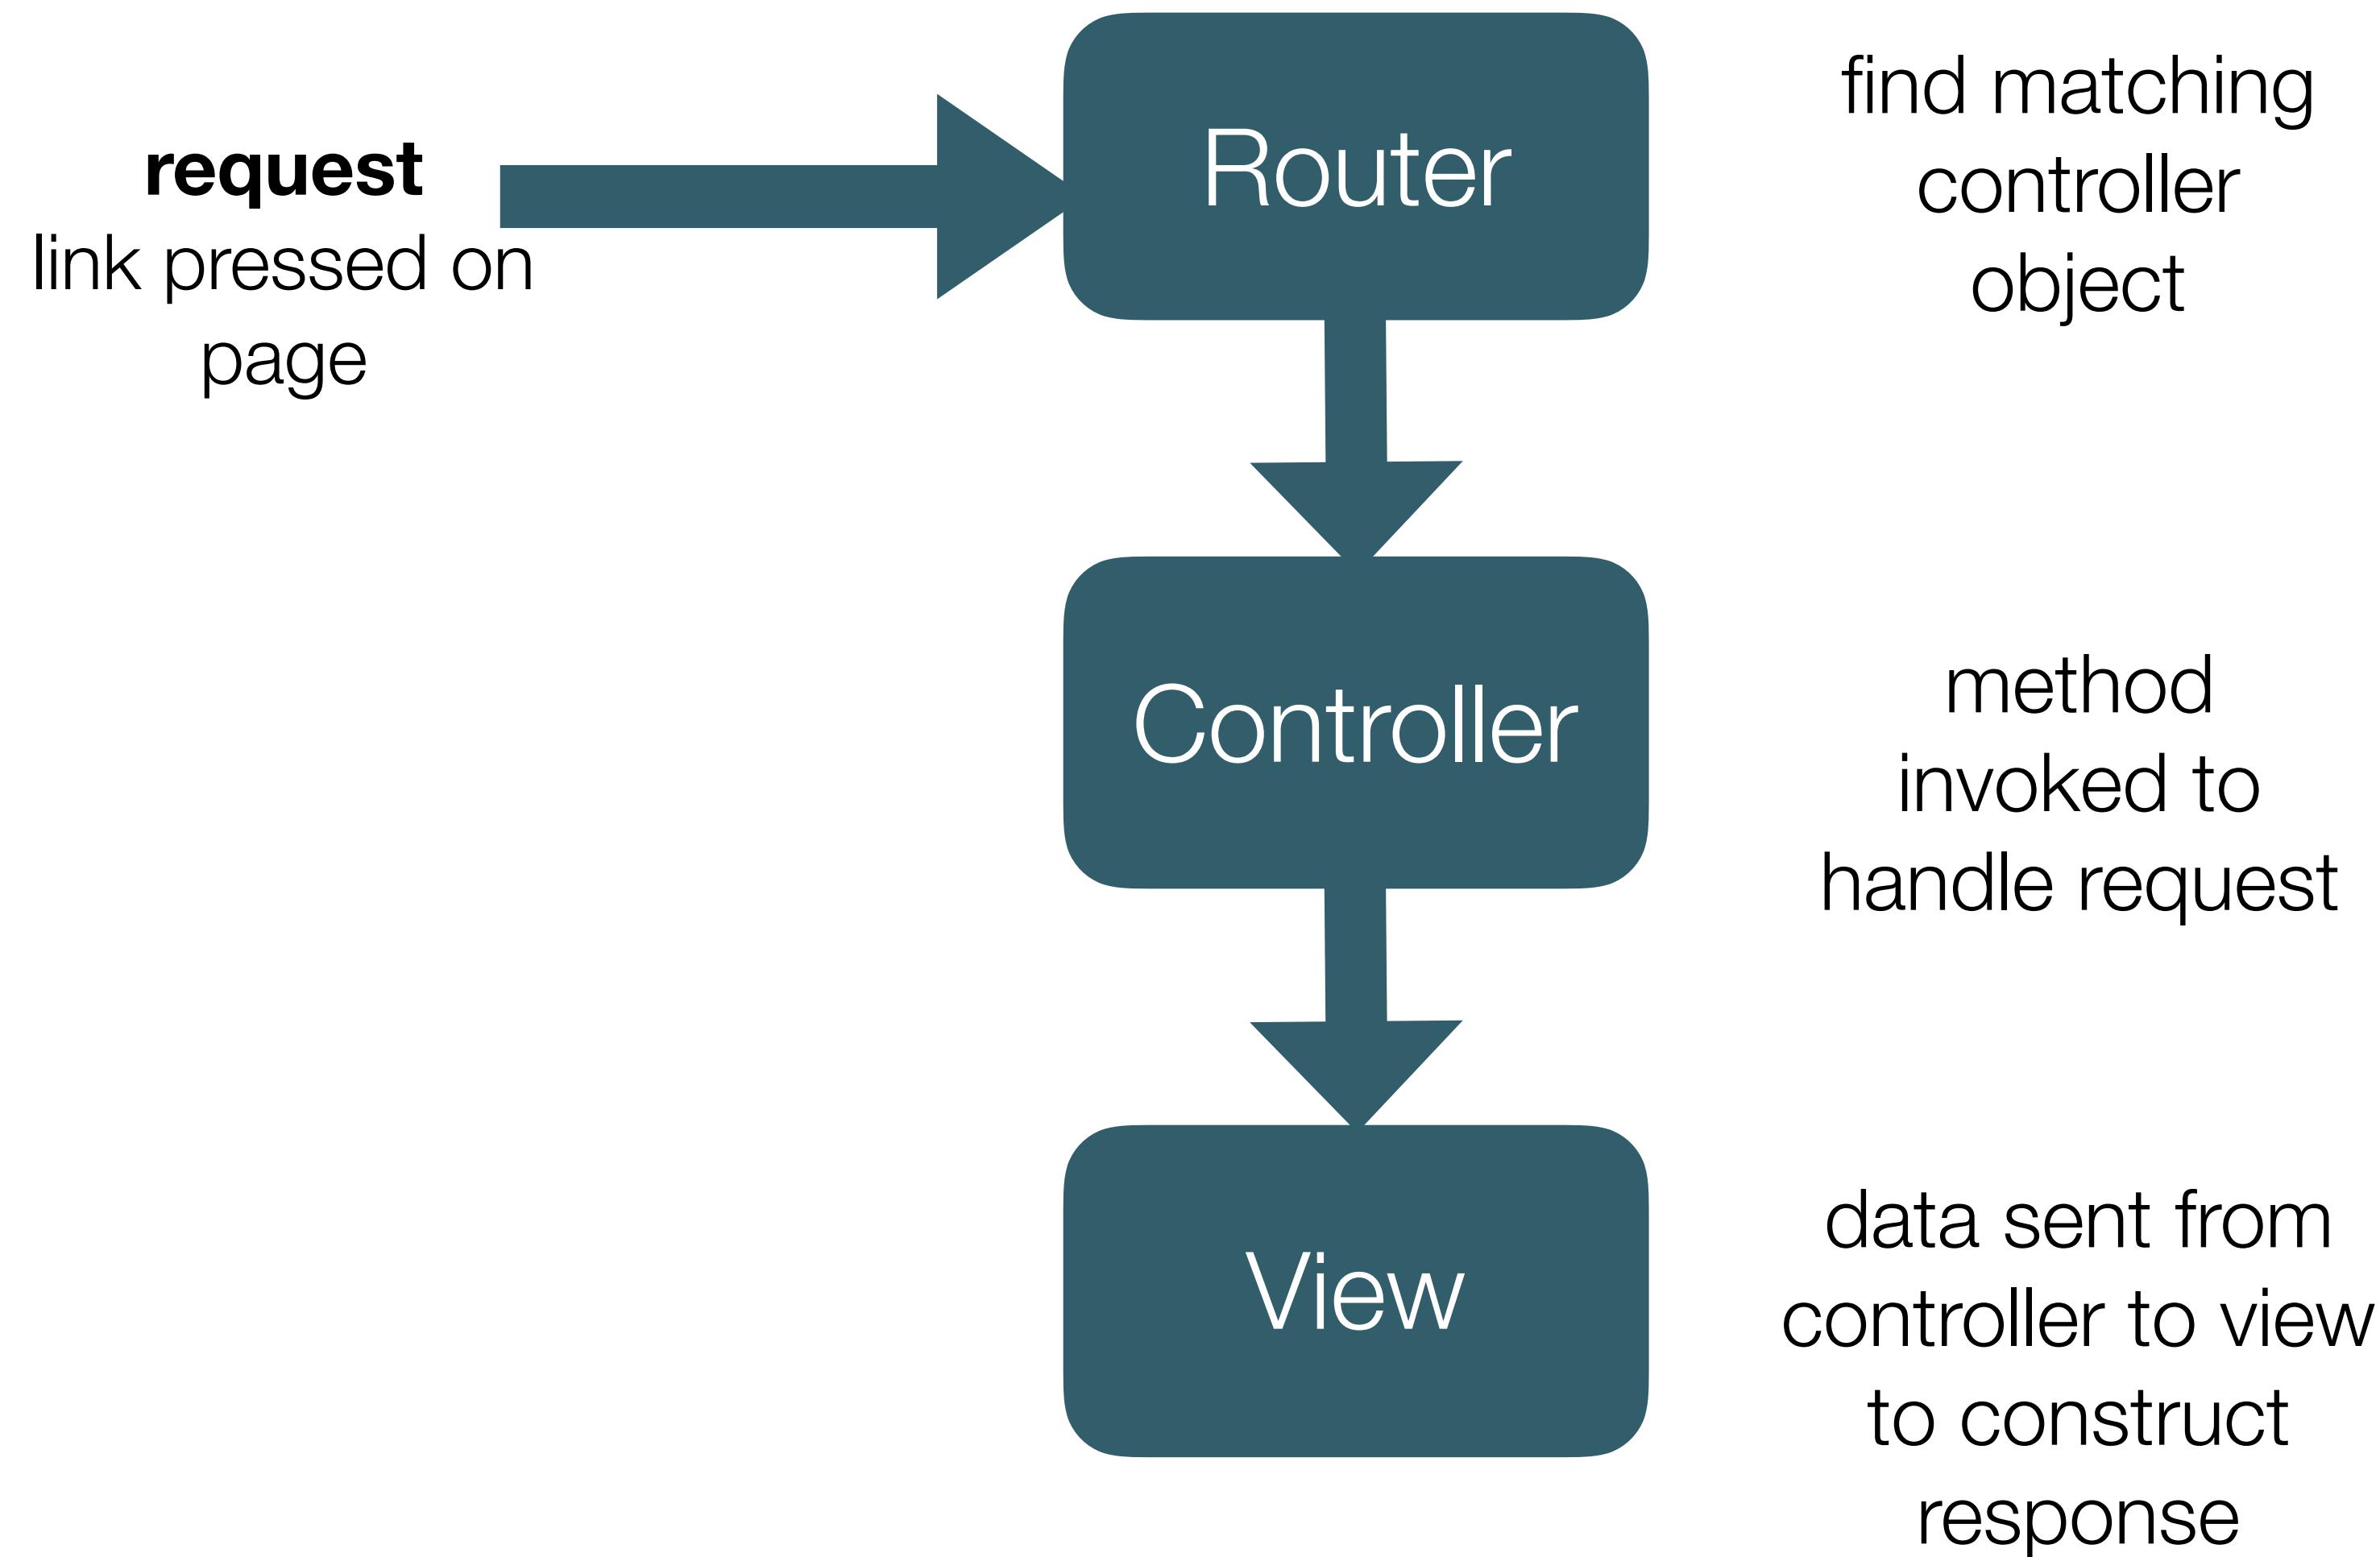

Router/Controller/View

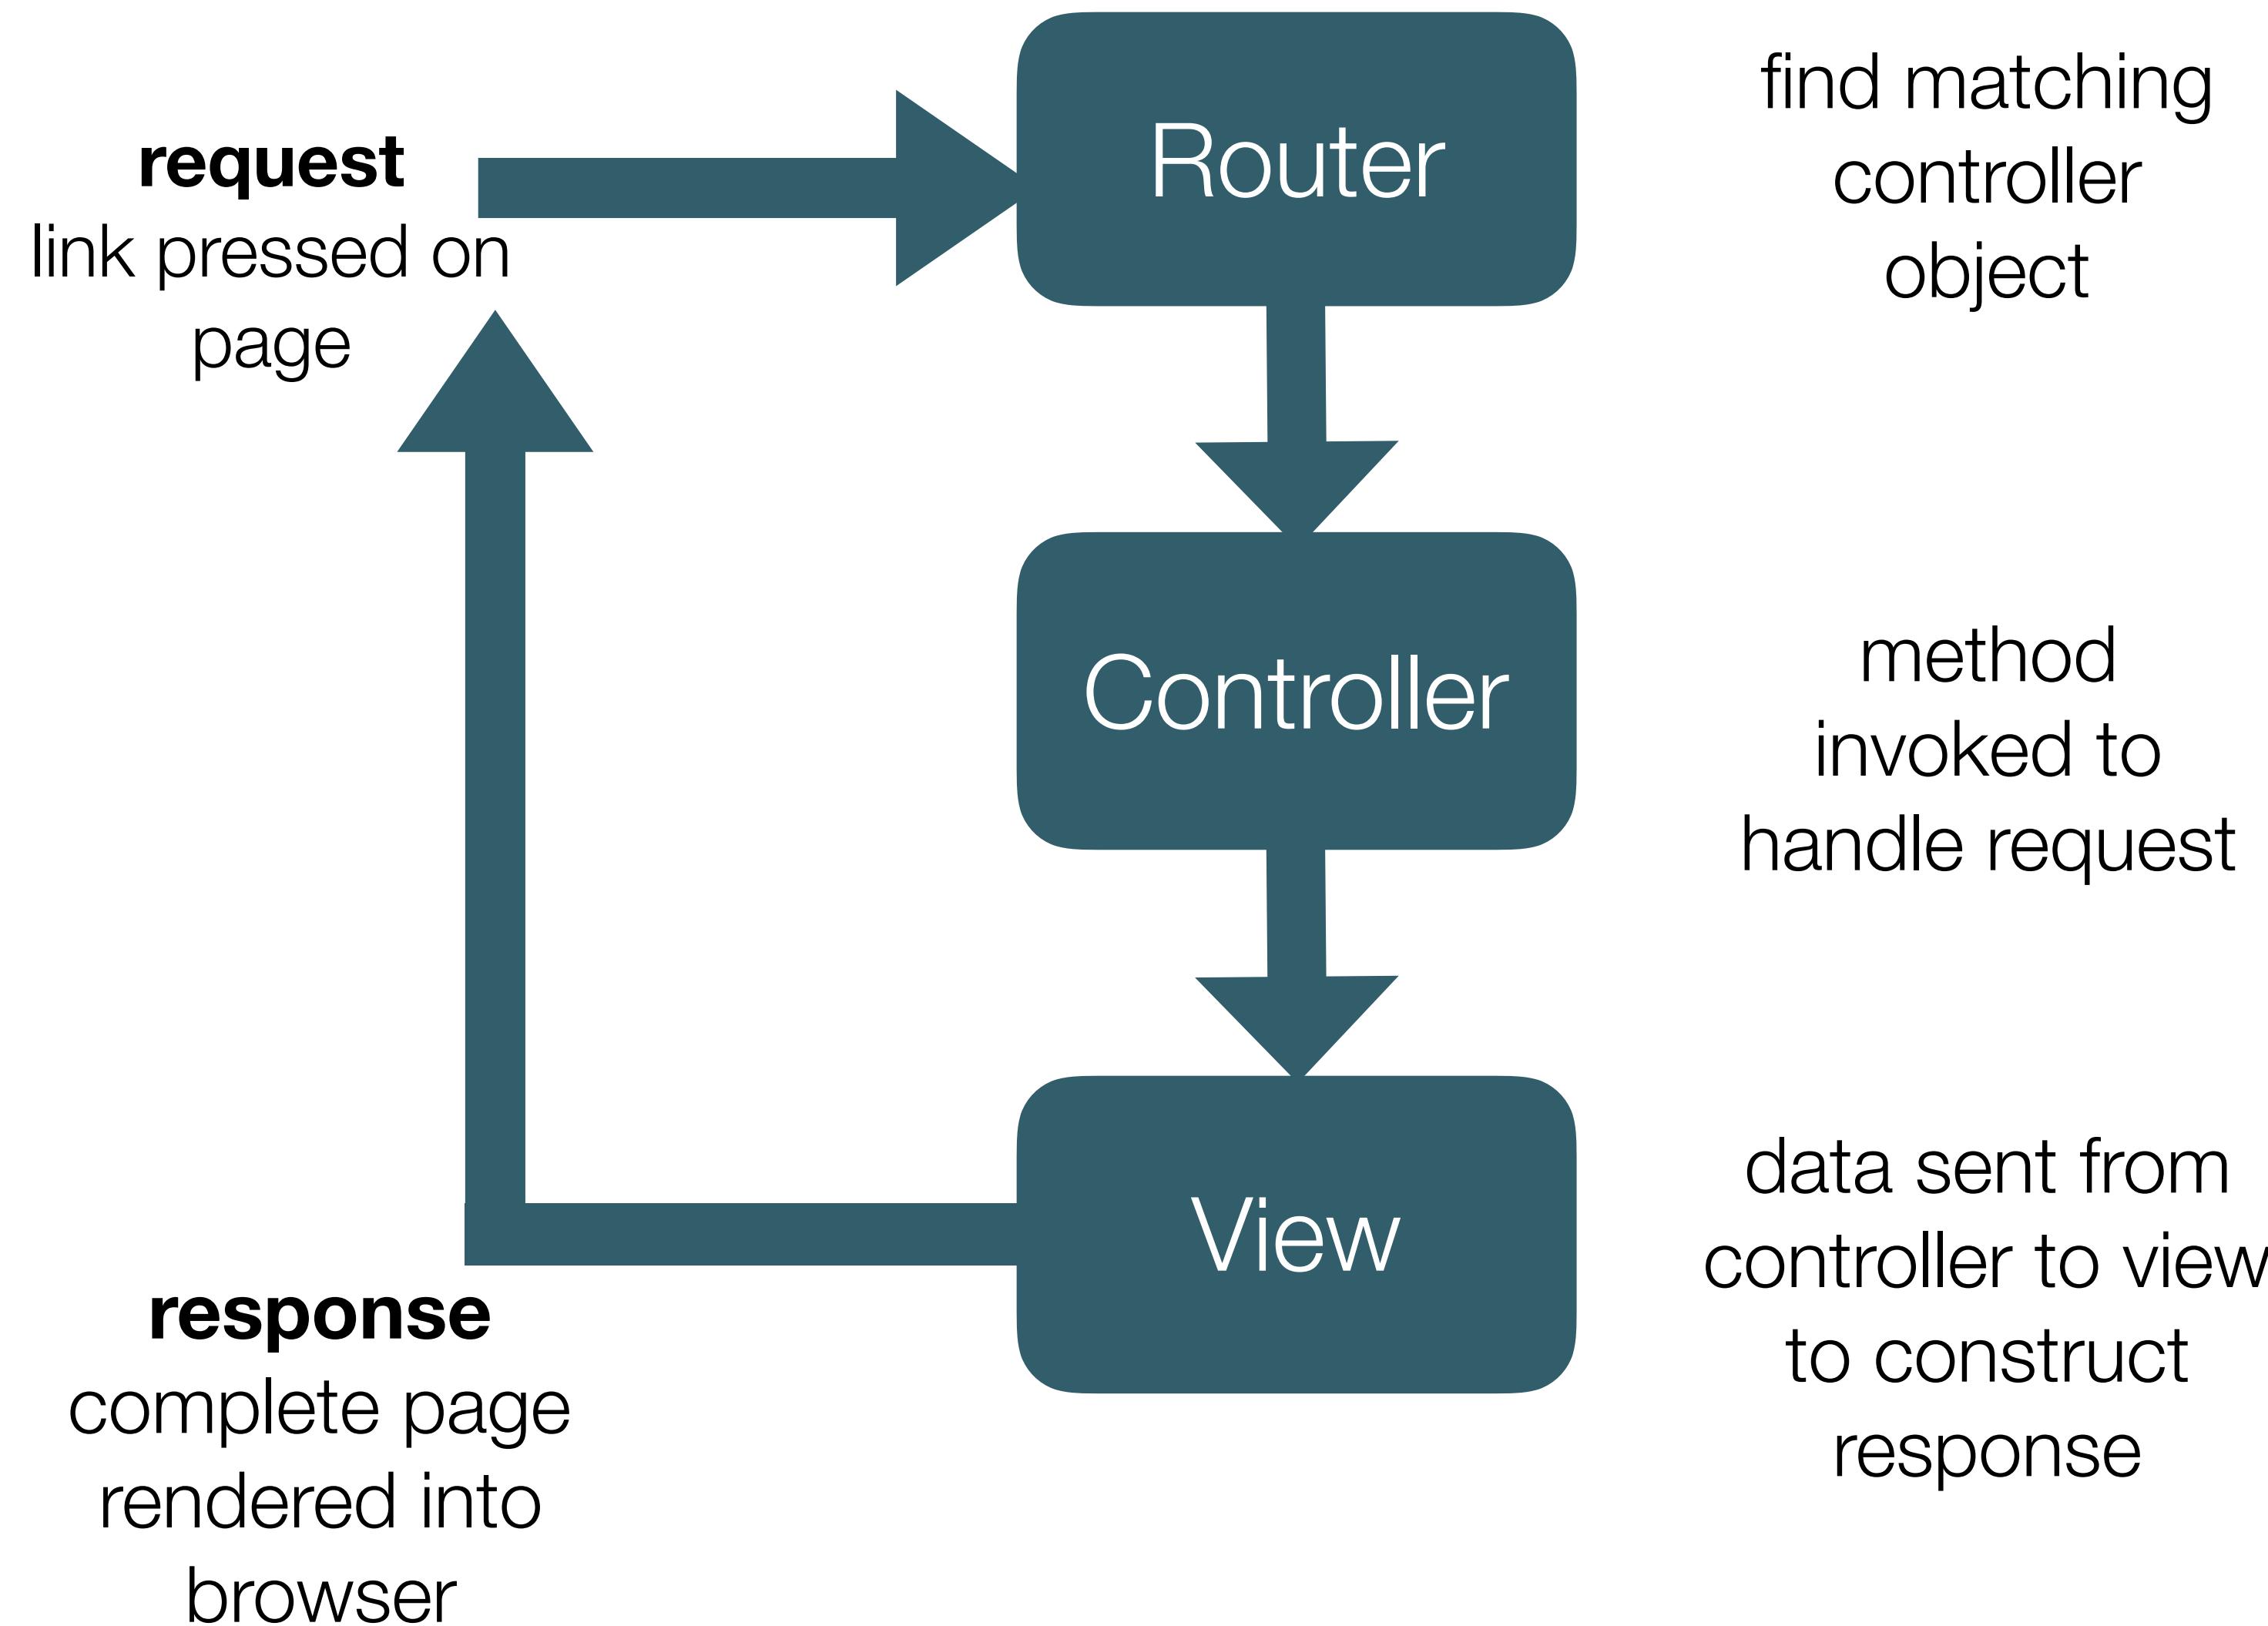

Router/Controller/View

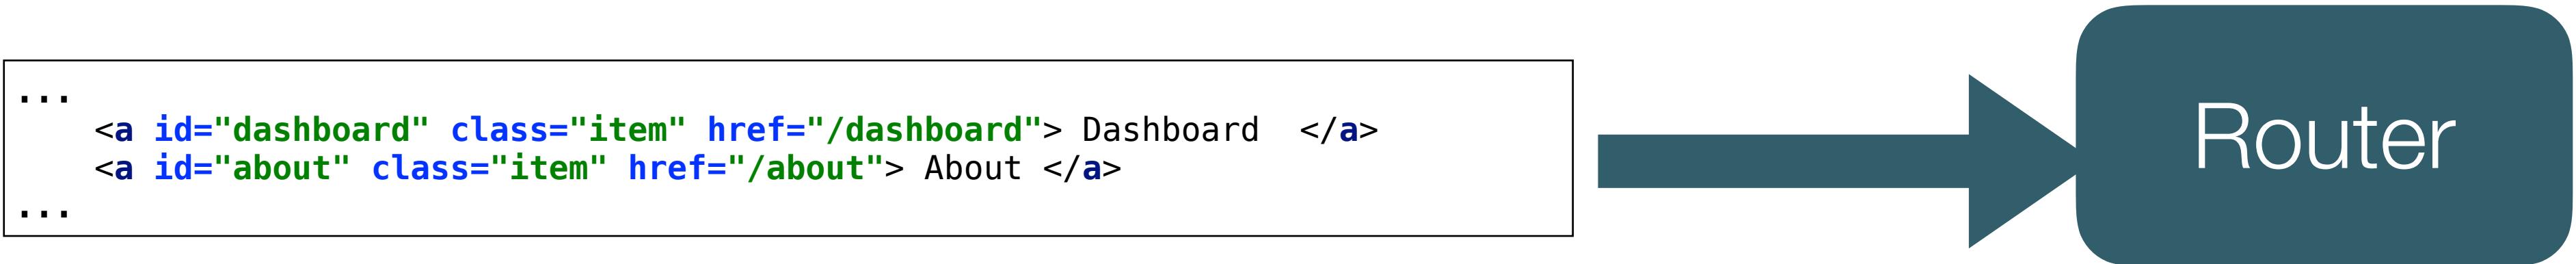

Router/Controller/View

Router/Controller/View

Request - link pressed on page

- Requests defined in links in views:
 - href in tags
 - href in Menus
 - href in Buttons
 - action links in forms

Router - find matching controller object

views/layouts/main.hbs
views/partials/mainpanel.hbs
views/partials/menu.hbs
views/about.hbs
views/dashboard.hbs
.eslintrc.json
.gitignore
README.md
package.json
routes.js
server.js

routes.js

Import 2 objects:

```
...
const dashboard = require('../controllers/dashboard.js');
const about = require('../controllers/about.js');

router.get('/', dashboard.index);
router.get('/dashboard', dashboard.index);
router.get('/about', about.index);
...
```

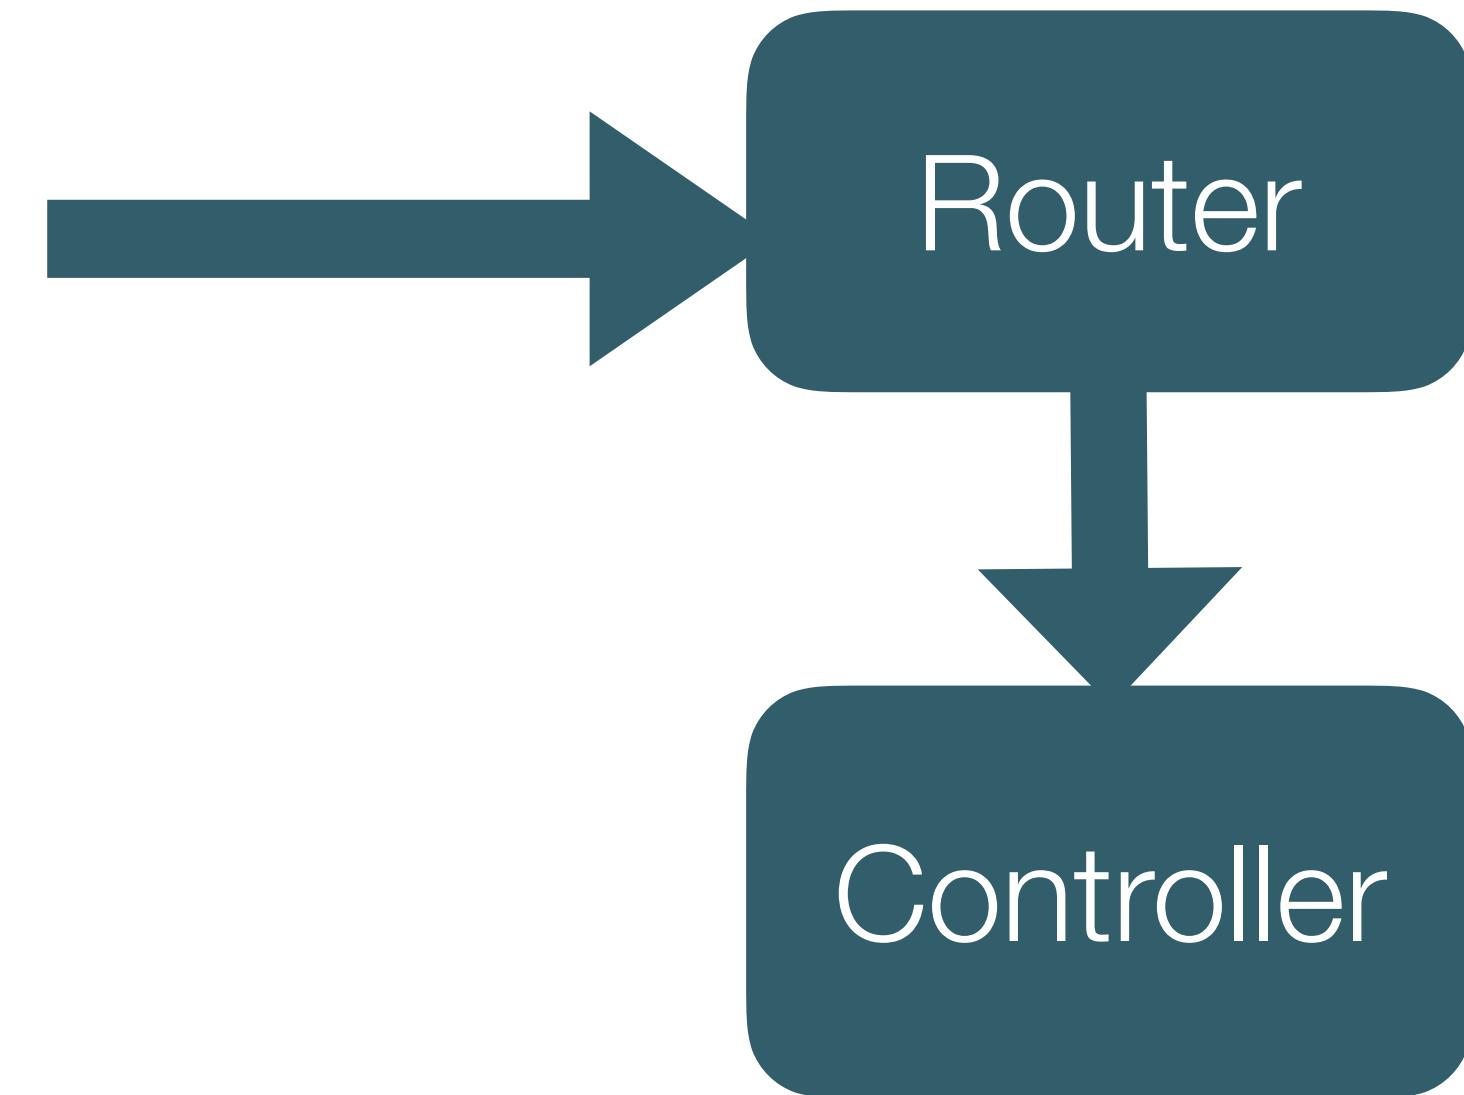

Match these two objects with each of these 'links'

Router Behaviour

If user selects
these links...

...then call the
corresponding
controller
methods

- ' / ' → `dashboard.index`
- /dashboard** → `dashboard.index`
- /about** → `about.index`

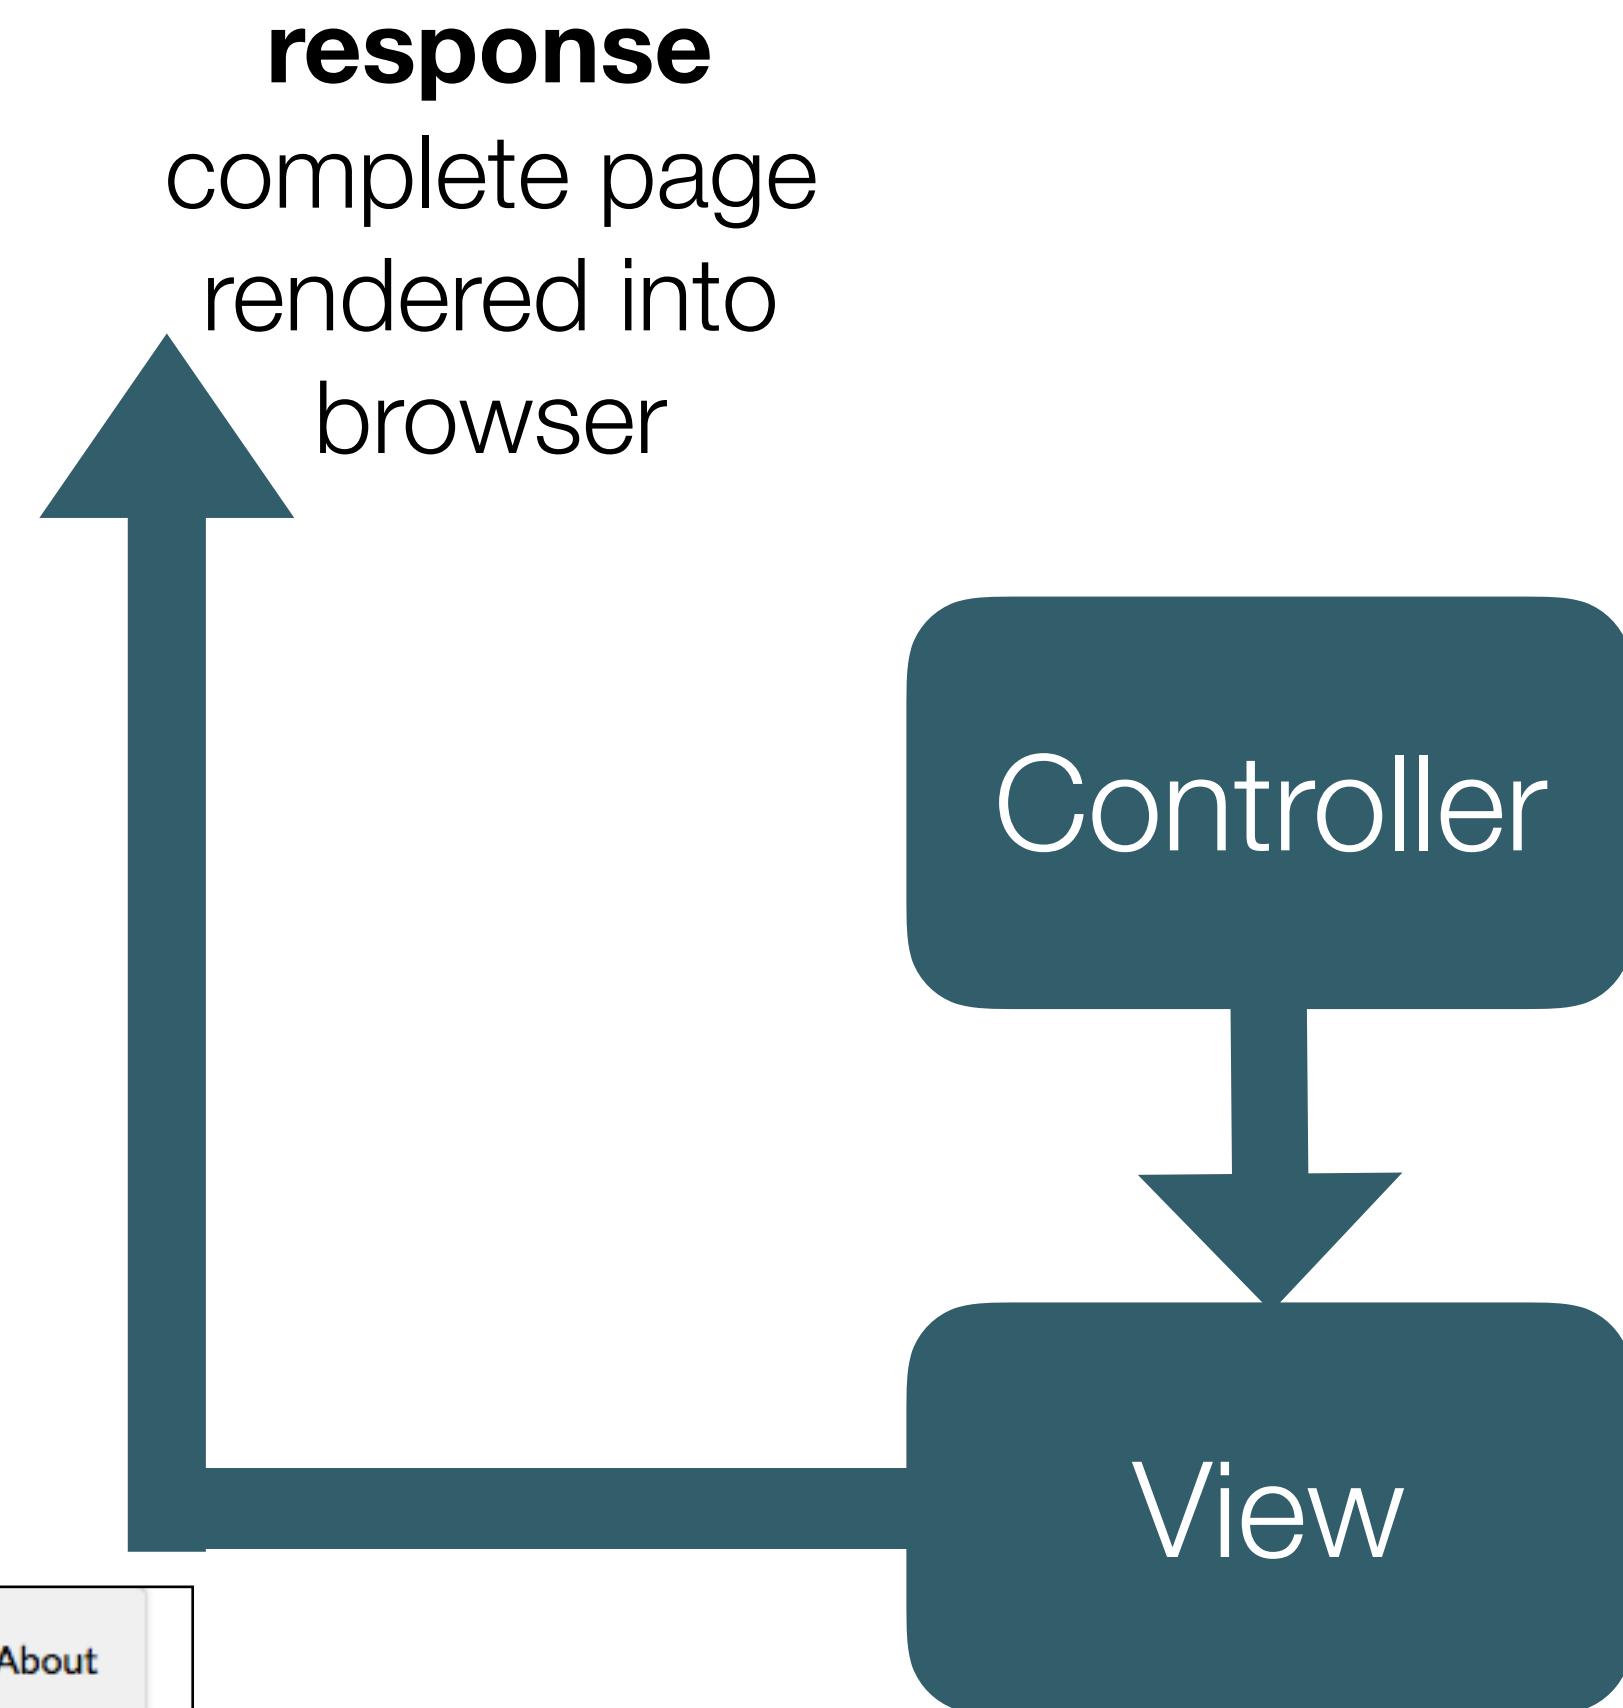

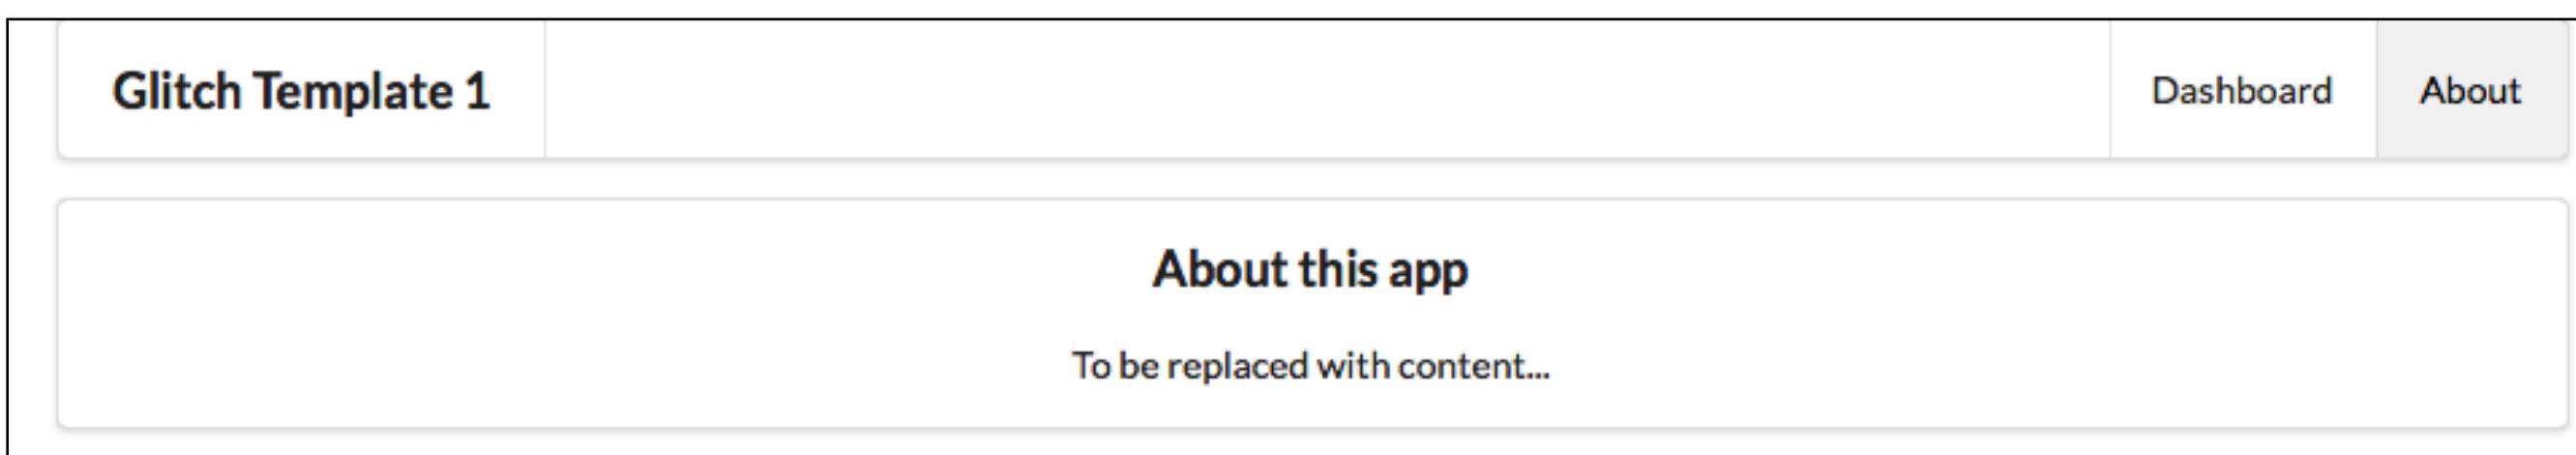

Controller method invoked to handle request

about.js

```
const about = {
  index(request, response) {
    logger.info('about rendering');
    const viewData = {
      title: 'About Template 1',
    };
    response.render('about', viewData);
  },
};
```

The About controller

The ‘About’ controller object -

index method parameters

- Has a single method - index, which has 2 parameters:
- **request** : object containing details of the user request
- **response**: object to be used to send response back to browser

```
const about = {  
  index(request, response) {  
    logger.info('about rendering');  
  
    const viewData = {  
      title: 'About Template 1',  
    };  
  
    response.render('about', viewData);  
  },  
};
```

The ‘About’ controller **index** function body

logs a message to the console (gomix console, not chrome console)

Create an object called **viewData**, containing a single property: **title**

```
const about = {  
  index(request, response) {  
    logger.info('about rendering');  
  
    const viewData = {  
      title: 'About Template 1',  
    };  
  
    response.render('about', viewData);  
  },  
};
```

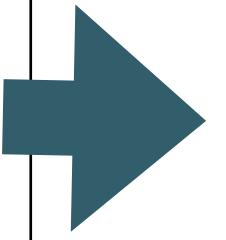

Data sent from controller to view to construct response

Calls **render** method on **response** with 2 parameters:

name of view to render
(about)

object to inject into the view prior to rendering it
(viewData)

```
const about = {  
  index(request, response) {  
    logger.info('about rendering');  
  
    const ViewData = {  
      title: 'About Template 1',  
    };  
  
    response.render('about', ViewData);  
  },  
};
```

The About Controller - Complete

```
'use strict';

const logger = require('../utils/logger');

const about = {
  index(request, response) {
    logger.info('about rendering');
    const ViewData = {
      title: 'About Template 1',
    };
    response.render('about', ViewData);
  },
};

module.exports = about;
```

strict mode
javascript for safety

import the **logger**
so we can use it

Export the **about**
object to it can be
used by the router

about.js

```
'use strict';

const logger = require('../utils/logger');

const about = {
  index(request, response) {
    logger.info('about rendering');
    const ViewData = {
      title: 'About Template 1',
    };
    response.render('about', ViewData);
  },
};

module.exports = about;
```

Back-end + Front-End

about.hbs

```
{{> menu id="about"}}

<section class="ui center aligned middle aligned segment">
  <p>
    About this app
  </p>
</section>
```

menu.hbs

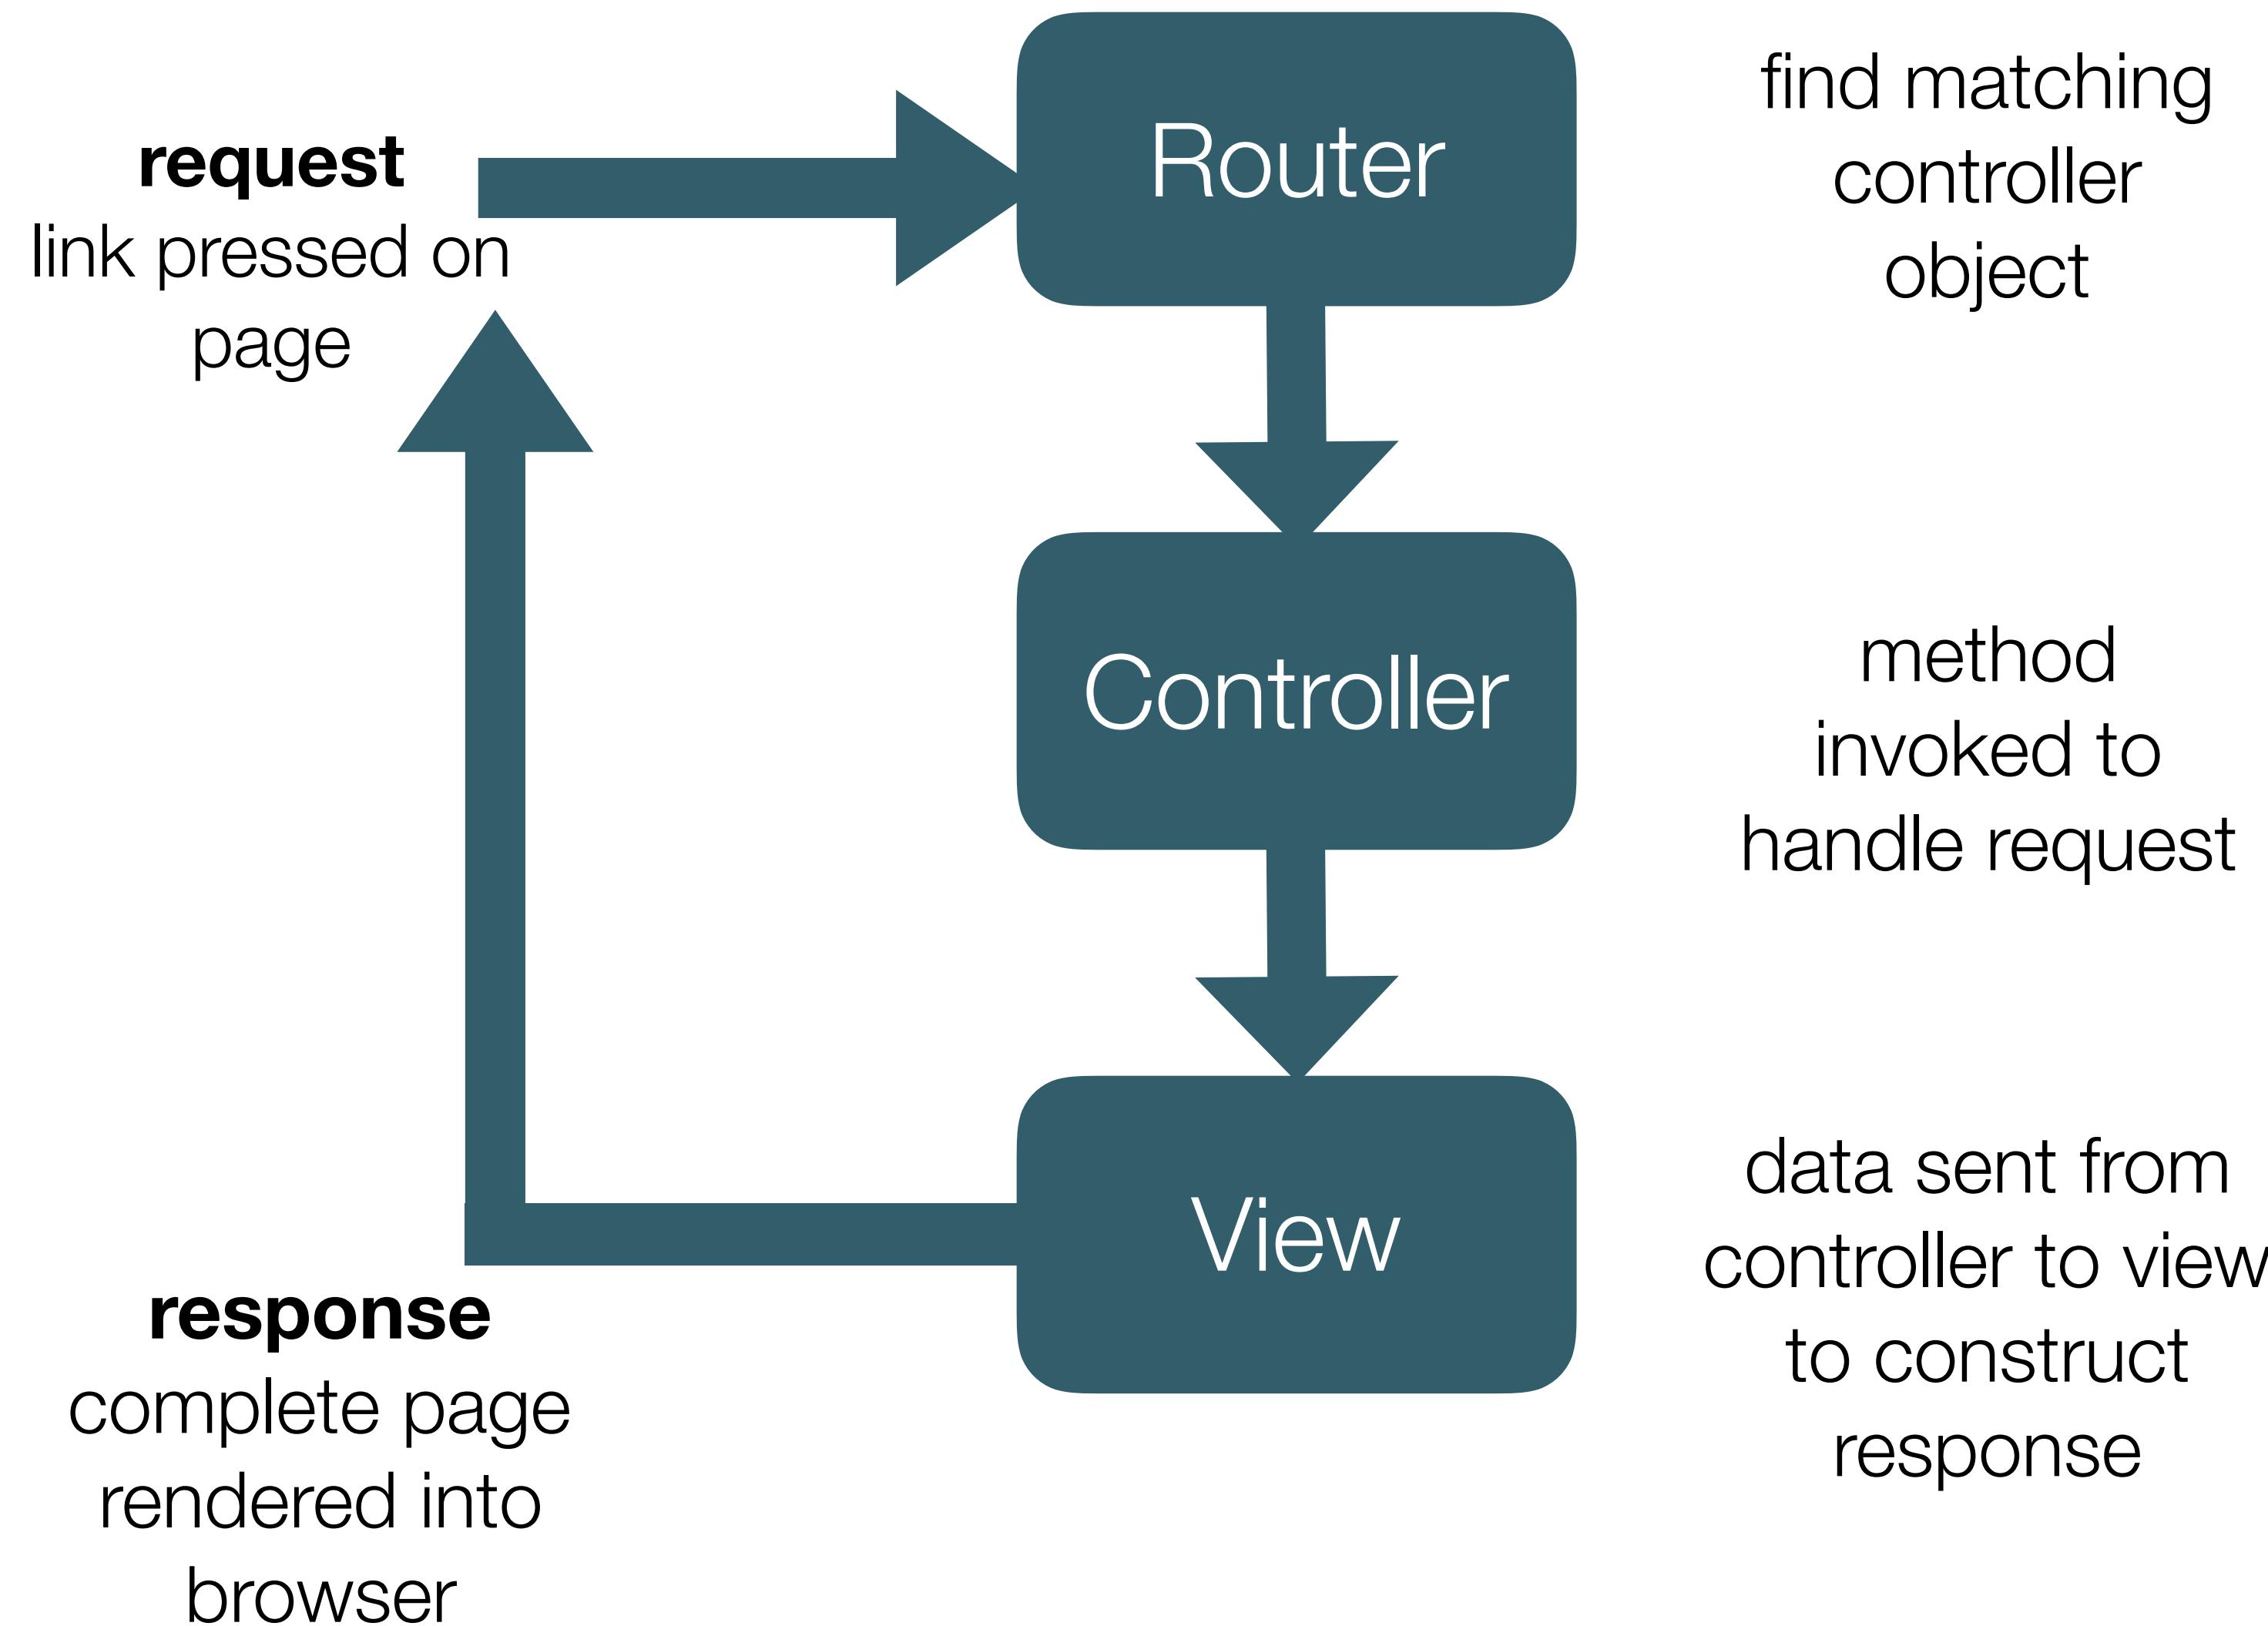

main.hbs

```
<nav class="ui menu">
  <header class="ui header item"> <a href="/"> Template 1 </a></header>
  <div class="right menu">
    <a id="dashboard" class="item" href="/dashboard"> Dashboard </a>
    <a id="about" class="item" href="/about"> About </a>
  </div>
</nav>

<script>
  $("#{{id}}").addClass("active item");
</script>
```

```
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8">
    <title> {{title}} </title>
    <meta charset="UTF-8">
    <script type="text/javascript" src="https://cdnjs.cloudflare.com/ajax/libs/jquery/3.5.1/jquery.min.js">
    <link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/semantic-ui/2.4.1/semantic.min.css">
    <script type="text/javascript" src="https://cdnjs.cloudflare.com/ajax/libs/semantic-ui/2.4.1/semantic.min.js">
    <link rel="stylesheet" type="text/css" href="/stylesheets/style.css">
  </head>
  <body>
    <section class="ui container">
      {{body}}
    </section>
  </body>
</html>
```

Router/Controller/View

Dashboard Controller

```
'use strict';

const logger = require('../utils/logger');

const dashboard = {

  index(request, response) {
    logger.info('dashboard rendering');
    const viewData = {
      title: 'Template 1 Dashboard',
    };
    response.render('dashboard', viewData);

  },
};

module.exports = dashboard;
```

Application Structure

2 Controllers

which will render

2 matching views

```
└ assets
  controllers/about.js
  controllers/dashboard.js
  utils/logger.js
  views/layouts/main.hbs
  views/partials/mainpanel.hbs
  views/partials/menu.hbs
  views/about.hbs
  views/dashboard.hbs
  .eslintrc.json
  .gitignore
  README.md
  package.json
  routes.js
  server.js
```

dashboard.js

```
'use strict';

const logger = require('../utils/logger');

const dashboard = {
  index(request, response) {
    logger.info('dashboard rendering');
    const viewData = {
      title: 'Template 1 Dashboard',
    };
    response.render('dashboard', viewData);
  },
};

module.exports = dashboard;
```

routes.js

```
...
router.get('/dashboard', dashboard.index);
router.get('/about', about.index);
...

```

about.js

```
'use strict';

const logger = require('../utils/logger');

const about = {
  index(request, response) {
    logger.info('about rendering');
    const viewData = {
      title: 'About Template 1',
    };
    response.render('about', viewData);
  },
};

module.exports = about;
```

dashboard.js

```
'use strict';

const logger = require('../utils/logger');

const dashboard = {
  index(request, response) {
    logger.info('dashboard rendering');
    const viewData = {
      title: 'Template 1 Dashboard',
    };
    response.render('dashboard', viewData);
  },
};

module.exports = dashboard;
```

controllers/views

dashboard.hbs

```
{{> menu id="dashboard"}}

<section class="ui segment">
  {{> mainpanel}}
</section>
```

about.js

```
'use strict';

const logger = require('../utils/logger');
