Lectures and Labs

- This weeks lectures and labs are based on examples in:
 - **Objects First with Java** - A Practical Introduction using BlueJ, © David J. Barnes, Michael Kölling (<https://www.bluej.org/objects-first/>)

Topic List

1. Method polymorphism

– E.g. display()

 2. Static and dynamic type

3. Overriding

4. Dynamic method lookup

5. Protected access

Static type and dynamic type

- A more complex type hierarchy requires further concepts to describe it.
- Some new terminology:
 - **static type**
 - **dynamic type**
 - **method dispatch/lookup**

Lets revisit our vehicle example...

*subclass objects
may be assigned to
superclass variables*

```
Vehicle v1 = new Vehicle();  
Vehicle v2 = new Car();  
Vehicle v3 = new Bicycle();
```

Static and dynamic type

What is the type of c1?

```
Car c1 = new Car();
```

The declared type of a variable is its **static** type.

What is the type of v1?

```
Vehicle v1 = new Car();
```

The type of the object a variable refers to is its **dynamic** type.

Static and dynamic type

*The compiler's job is to check for **static-type violations**.*

What is the type of v1?

```
Vehicle v1 = new Car();
```

The declared type of a variable is its *static type*.

Vehicle

The type of the object a variable refers to is its *dynamic type*.

Car

Recall our attempt to solve this problem...

Leonardo da Vinci
Had a great idea this morning.
But now I forgot what it was. Something to do with flying ...

What we have

message filename caption are missing from what we have. i.e. the subclass specific fields

Recall our attempt to solve this problem...

We placed `display()` in each subclass where it has access to the information it needs.

But:

- **Post**'s fields are private and **NewsFeed** cannot find a `display()` method in **Post**.

```
for(Post post : posts) {  
    post.display();  
    // But there is no display() method in Post  
    //  
    // Compile-time error (static-type violation)  
    //  
    // because method display() is not found  
    // in the Post class  
}
```

**Any
Questions?**
