Topic List

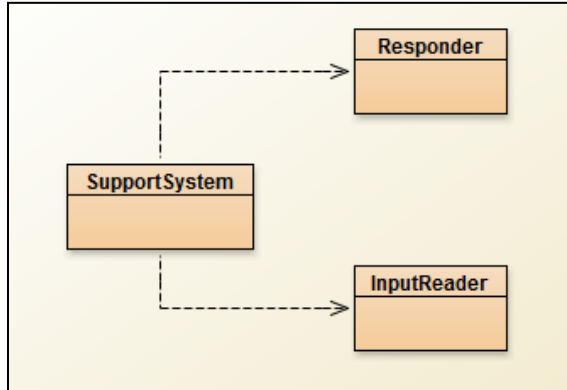

1. Recap: Technical Support System V1

2. Technical Support System V2

- Overview of the System
- Responder class
 - Random

Three Classes

```
Welcome to the DodgySoft Technical Support System.
Please tell us about your problem. We will assist you
with any problem you might have. Please type 'bye'
to exit our system.
> my computer is broken
That sounds interesting. Tell me more...
> really broken
That sounds interesting. Tell me more...
> help me
That sounds interesting. Tell me more...
> pleaseeeeeeee
That sounds interesting. Tell me more...
> BETY
That sounds interesting. Tell me more...
> BYE
Nice talking to you. Bye...
```

InputReader

Fields

- **input**

Methods

- **InputReader()**
- **getInput()**

Responder

Fields

Methods

- **generateResponse()**
- **Responder()**

SupportSystem

Private Fields

- **reader**
- **responder**

Methods

- **SupportSystem()**
- **main()**
- **start()**
- **printWelcome()**
- **printGoodbye()**

How Can We Help?

Topic List

1. Recap: Technical Support System V1

2. Technical Support System V2

- 
- Overview of the System
 - Responder class
 - Random

Technical Support System V2

- A console based, textual dialog system.
- The system provides a **random** response from a list of pre-defined responses

- "That sounds interesting. Tell me more..."
- "I need a bit more information on that."
- "Have you checked that you do not have a dll conflict?"
- "That is explained in the manual. Have you read the manual?"
- "That's not a bug, it's a feature!"
- "Could you elaborate on that?"
- etc.

repository

Technical Support System V2

Sample

```
Welcome to the DodgySoft Technical Support System.
```

```
Please tell us about your problem. We will assist you  
with any problem you might have. Please type 'bye'  
to exit our system.
```

```
> my computer is broken
```

```
No other customer has ever complained about this before.  
What is your system configuration?
```

```
> windows
```

```
That sounds odd. Could you describe that problem in more detail?
```

```
> it won't boot up
```

```
That sounds odd. Could you describe that problem in more detail?
```

```
> I get the blue screen of death
```

```
I need a bit more information on that.
```

```
> it's blue
```

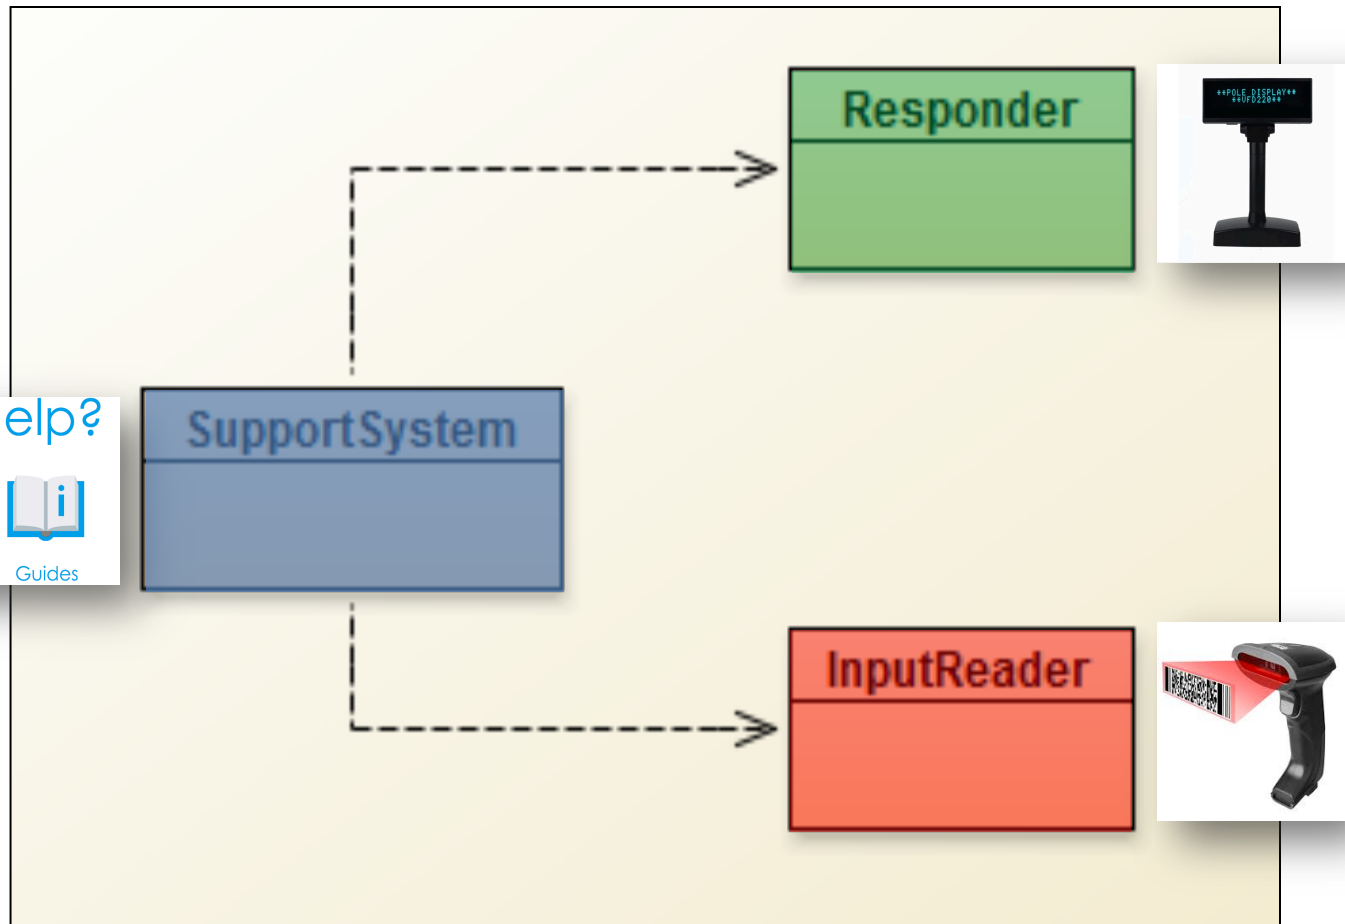

```
That sounds interesting. Tell me more...
```

```
> really blue
```

```
That's not a bug, it's a feature!
```

```
>
```

**No change
at CLASS
level**

```

import java.util.Scanner;

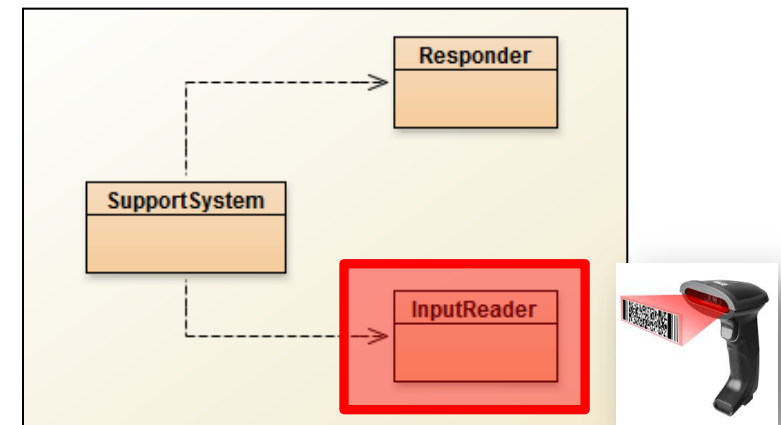

public class InputReader{

    Scanner input;

    public InputReader(){
        input = new Scanner(System.in);
    }

    /**
     * Read a line of text from the console and return it as a String.
     *
     * @return A String typed by the user.
     */
    public String getInput() {
        System.out.print("> ");           // print prompt
        String inputLine = input.nextLine().trim().toLowerCase();
        return inputLine;
    }
}

```

No change in
InputReader
class

```
public class SupportSystem{
    private InputReader reader;
    private Responder responder;

    public SupportSystem() {
        reader = new InputReader();
        responder = new Responder();
    }

    public static void main(String[] argvs){
        SupportSystem app = new SupportSystem();
        app.start();
    }

    public void start() {
        printWelcome();
        String input = reader.getInput();
        while(! input.startsWith("bye")) {
            String response = responder.generateResponse();
            System.out.println(response);
            input = reader.getInput();
        }
        printGoodbye();
    }
}
```

Topic List

1. Recap: Technical Support System V1

2. Technical Support System V2

– Overview of the System

– **Responder** class

• Random

//V1 code

```
public class Responder{
```

```
/**
```

```
 * Construct a Responder - nothing to do
```

```
 */
```

```
public Responder(){
```

```
}
```

```
/**
```

```
 * Generate a response.
```

```
 * @return A string that should be displayed as the response
```

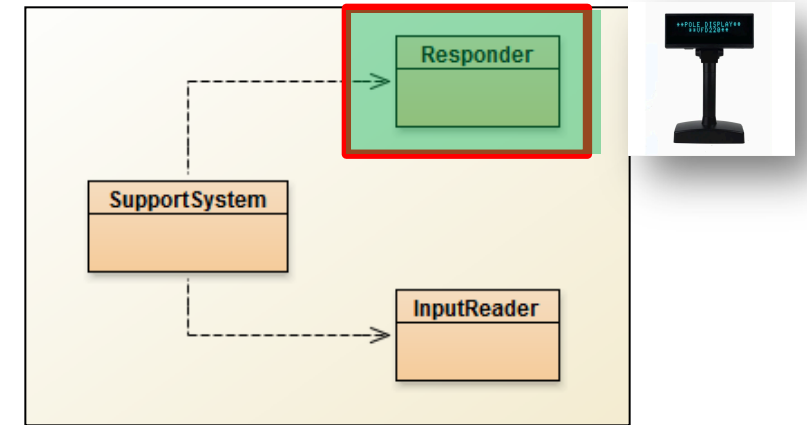

```
 */
```

```
public String generateResponse(){
```

```
    return "That sounds interesting. Tell me more...";
```

```
}
```

```
}
```

This class will change –
to generate a random
response

Repository of Responses

- Instead of responding with:
 - "That sounds interesting. Tell me more...";

- We would like to respond with a **random** response from a repository of responses

- "That sounds interesting. Tell me more..."
- "I need a bit more information on that."
- "Have you checked that you do not have a dll conflict?"
- "That is explained in the manual. Have you read the manual?"
- "That's not a bug, it's a feature!"
- "Could you elaborate on that?"
- etc.

repository

- But how do we **randomise** the selection of a response?

Topic List

1. Recap: Technical Support System V1

2. Technical Support System V2

– Overview of the System

– **Responder** class

• Random

Using Random

- The library class **Random** can be used to generate random numbers

```
1 import java.util.Random; // import the library class
...
2 Random randomGenerator = new Random(); // declare & init variable
...
3 //random int number (no upper or lower bound)
  int index1 = randomGenerator.nextInt();
...
3 //random number between 0 (inclusive) and 100 (exclusive)
  int index2 = randomGenerator.nextInt(100);
```

```
import java.util.ArrayList;
```

```
public class Responder{
```

```
    private ArrayList<String> responses;
```

```
    public Responder() {
```

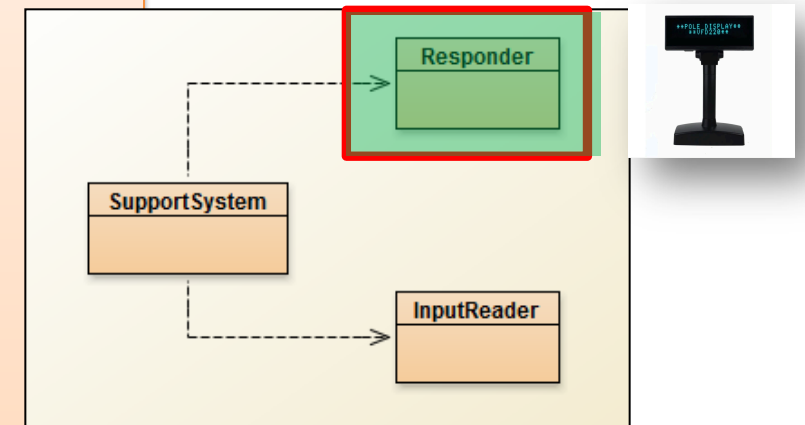

```
        responses = new ArrayList<String>();  
        fillResponses();  
    }
```

```
    private void fillResponses() {
```

```
        responses.add("That sounds odd. Could you describe that problem in more detail?");  
        responses.add("No other customer has ever complained about this before. \n" +  
            "What is your system configuration?");  
        responses.add("That sounds interesting. Tell me more...");  
        responses.add("I need a bit more information on that.");  
        responses.add("Have you checked that you do not have a dll conflict?");  
        responses.add("That is explained in the manual. Have you read the manual?");  
        responses.add("Your description is a bit wishy-washy. Have you got an expert\n" +  
            "there with you who could describe this more precisely?");  
        responses.add("That's not a bug, it's a feature!");  
        responses.add("Could you elaborate on that?");
```

```
    }
```

```
}
```

V2.0 Responder...changes

The Responder class declares a private ArrayList of Strings called **responses**, which is initialised in the constructor.

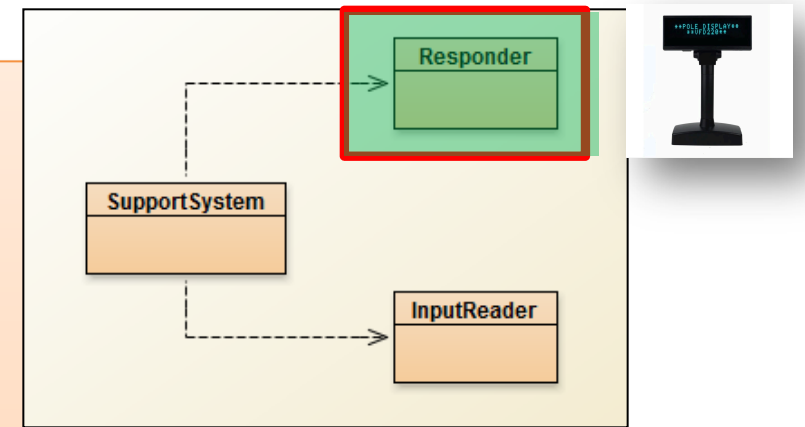

This is used by fillResponses() to create the repository of responses.

```
1 import java.util.ArrayList;
import java.util.Random;

2 public class Responder{
    private Random randomGenerator; // declare
    private ArrayList<String> responses;

    public Responder() {
        randomGenerator = new Random(); // init
        responses = new ArrayList<String>();
        fillResponses();
    }

    public String generateResponse() {
        // Pick a random number between 0 (inclusive) and the size
        // of the ArrayList (exclusive).
3         int index = randomGenerator.nextInt(responses.size()); // repo size
        return responses.get(index);
    }
}
```

V2.0 Responder changes...

to return a **random** response from a repository of responses.
